

AIConsumerAgent Flow & Status

Operational Blueprint for Application Testers (March 2026)

THE UNIFIED ARCHITECTURE

Gaussian Jitter (8-45s) is applied. Message is mirrored to local SQLite and JSON storage for audit trails.

CURRENT FEATURE MATRIX

Component	Sub-Feature	Status
Communication	WhatsApp Connectivity (Baileys)	READY
Intelligence	Local RAG (Knowledge Ingestion)	READY
Governance	Admin Escalation (Relay)	READY
Dashboard	Real-time KPI Analytics	WIP
Security	Anti-Ban Jitter (Gaussian)	READY

KNOWN ISSUES & "WIP" ITEMS

⚠️ Response Delay (Intentional)

Testers will notice a delay of **8s to 45s** before the bottom replies. This is **not** a bug; it is the "Anti-Ban Jitter" simulating human-like typing to protect the WhatsApp account from detection.

🔄 Double Messaging

During rapid re-connection cycles or multi-device syncs, some messages might be processed twice. We are currently hardening the deduplication window.

📊 Dashboard Refresh

The "Conversation Topics" and "Insights" charts may display placeholder

data until you manually click **"Sync Insights"** after several conversations are resolved.
