

# AIConsumerAgent Installation

## Tester Onboarding & Configuration Guide

### 1. INITIAL SETUP

---

#### 1 Download & Install

Download the latest DMG (macOS) or EXE (Windows). On Mac, drag **AIConsumerAgent.app** to your Applications folder.

#### 2 Gatekeeper Bypass (Mac Only)

If you see a "Security Warning," right-click the app and choose **Open**, or run the `install-mac.sh` script provided in your package.

#### 3 Connect WhatsApp

Launch the app and click **Connect Account**. Scan the QR code using your WhatsApp Business (or personal) app.

### 2. CRITICAL "HANDSHAKE" STEP

---

To prevent unauthorized usage, the bot requires a **Personal Identity Link**. This tells the bot which phone number belongs to the administrator.

#### A Enter Admin Number

In **Settings**, enter your personal WhatsApp number. The bot will send you a message immediately.

#### B Verify with Code

A **6-digit code** will appear on your computer screen. Reply to the bot on your phone with this exact code.

Identity verified! You can now "relay" messages back to customers by replying to bot notifications.

# END-TO-END USAGE LIFECYCLE

## STEP 1: IDENTITY

### Initial Handshake

Link your personal device as the **Admin** to receive escalations and control the bot remotely.

## STEP 2: TRAINING

### Knowledge Ingestion

Upload PDFs/Excel files. The AI extracts business facts to ensure accurate customer support.

## STEP 3: PERSONA

### Assistant Identity

Configure the Tone (Professional/Friendly) and Assistant Name in the Settings panel.

## STEP 4: LIVE

### Activate Autonomous Mode

Toggle **Bot Mode** on. The agent begins monitoring queues and replying to customers.

## FINAL: MONITORING

### Human-in-the-Loop

If the AI is unsure, you will get a WhatsApp notification. Simply reply to step in and handle the lead.
