

User Manual & Setup Guide

AICONSUMERAGENT V1.2 • CONFIGURATION & LIFECYCLE

1. The Application Interface

The sidebar of AIConsumerAgent provides access to several specialized views. Understanding the purpose of each "tab" is essential for effective testing.

Command Center (Dashboard)

Your global overview. Monitor **Messages Per Day**, **Active Leads**, and the **Knowledge Doc Count**. Use the "Analysis" section to categorize customer intent via AI.

All Chats (Conversations)

A unified stream of active WhatsApp sessions. Select a chat to view the AI's internal "Thoughts" and verify if it is using your knowledge base correctly.

Lead Directory (CRM)

A CRM-lite view. It auto-extracts **Customer Names**, **Phone Numbers**, and **Leads**.

Status**. Use this to track conversions from casual chat to business lead.

Brain View (Advanced)

For technical audit. View the **Memory Logs** (what the agent has learned about users) and **RAG Indexed Files** (verify if your PDFs were correctly converted).

2. Connecting the AI (OpenRouter Guide)

To enable the agent's "Brain," you must connect an LLM Provider. We recommend **OpenRouter** for access to top-tier models like GPT-4o or Claude 3.5 Sonnet.

- 1 Generate API Key:** Visit openrouter.ai/keys, sign in, and create a new key. Copy it securely.
- 2 Access Settings:** Click the **Gear Icon** in the bottom-left sidebar of the AIConsumerAgent app.
- 3 Provider Choice:** Navigate to the **AI Model Connection** section and select **OpenRouter** from the pill row.
- 4 Link & Select:** Paste your API Key. The app will fetch available models. Choose `openai/gpt-4o` or your preferred model.

Important: If the "Verify Connection" button fails, ensure your OpenRouter account has at least \$1.00 in credits, as the bot performs a small health check on connection.

3. App Usage Lifecycle Flow

This flowchart summarizes the onboarding journey from first install to autonomous business support.

1

Identity Verification: Pair your "Admin" phone to receive relay notifications.

2

Doc Training: Upload Company PDFs/XLS to the Dashboard's "Train AI" section.

3

Persona Tuning: Set "Tone" and "Assistant Name" in Identity Settings.

4

Go Live: Enable "Bot Mode" switch. The agent is now autonomous.

5

Supervision: Reply to bot escalations on your phone to resolve complex cases.
